How to Use the Trailer Guardian

1. Remove the tow ball and slide the Trailer Guardian mounting bracket onto the ball mount.
2. The tow ball can then be placed through mounting bracket and ball mount and secured with washer and nut.
3. Once the trailer coupler has been attached and secured onto the tow ball, place the Trailer Guardian's coupler guard into the vertical tubes of the mounting bracket. Align the holes so that the coupler guard is in the closest position to the top of the coupler (see image 3). Insert the lock and pin in holes.

The coupler guard is now secure and will keep the trailer coupler from popping off of the tow ball. It extends out over the coupler preventing it from becoming detached.
